ΣRPLY

Web-Based
On Demand
Business Suite

ERPLY live in action:

http://erply.net

run your shop online

Sell goods online and in and in multiple stores. Use your existing POS hardware.

keep track of accounts

Enter your business and out-of-pocket expenses and quickly rebill to clients.

cash flow in your hands

Now you have a bank in your office. Compare accounts and track balances.

track all relationships

Manage contacts, leads, customers, vendors and more.

handle your emails

Easily link emails into ERPLY when you send or receive emails from your contacts.

make sure things get done

Create tasks and share with co-workers. Don't miss a call or a proposal deadline.

control your inventory

Do all inventory management routines with a single click. Unlimited warehouses included.

create invoices like a pro

It takes only 3 clicks to create a new invoice. Deliver it via email, in PDF format.

tune it to fit your company

Customise ERPLY by adding the data fields you need. Custom reports available.

manage your sales pipeline

Track bids, deals, proposals and contracts. See it all in the sales dashboard.

complete history in one place

Attach notes, emails, docs and files to a contact and review them whenever you need.

enjoy purchase planning

Check inventory amounts, create automatic purchase orders. Export to XML or PDF.
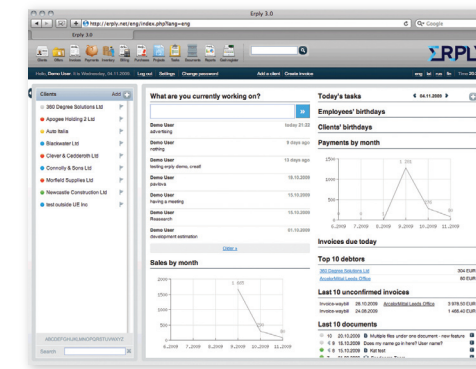

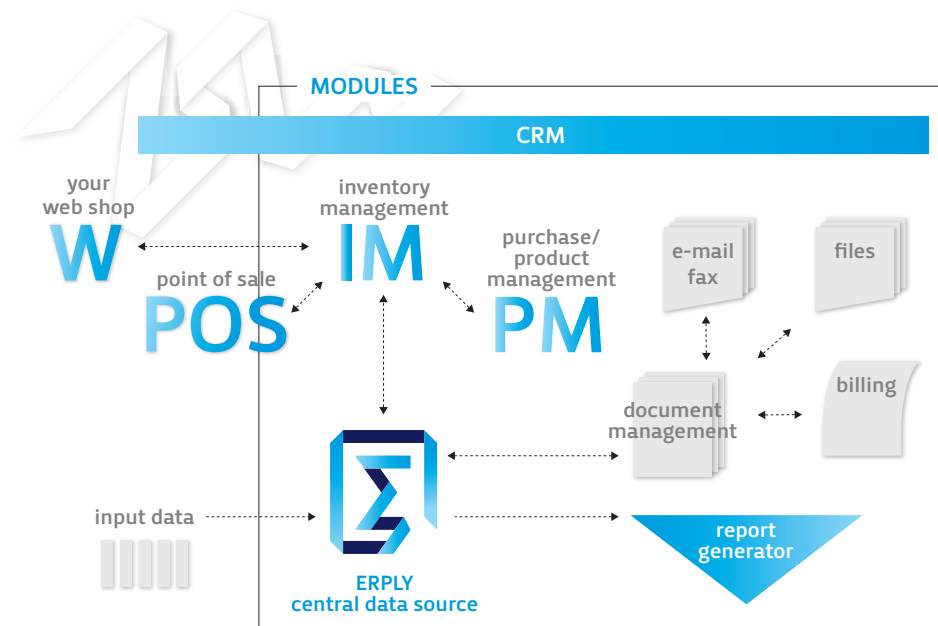

Turn over for more previews!

ERPLY is available in English, Finnish and Russian languages and soon in German. We have over 300 customers.

ERPLY

ERPLY is a software for commercial retail inventory and e-commerce that handles data across several sales locations, online stores and offices and provides real-time dashboards with relevant data.

ERPLY gives you an extensive set of business modules: inventory, POS, billing and webshop software.

cloud computing

The current challenging economic environment demands that every industry cut costs and improve productivity. Until now, an ERP system has been the solution for achieving these objectives. But traditional ERP systems are expensive due to high upfront capital costs, high ongoing maintenance fees, and high costs to customize and upgrade to new versions.

There is now an alternative: ERP based on Cloud Computing technology. ERP on the Cloud provides the convenience of computing capacity on-demand over the Internet.

In addition, it has the same security and flexibility of an on-premise deployment – the ability to customize and upgrade, all at a dramatically lower cost than a traditional ERP system.

ERPLY 3.0 –
a powerful ERP, inventory management and invoicing software – is now available for sign-up.

dashboard

Dashboard offers instant snapshots of your key performance indicators (KPIs), and provides real-time trend graphs and reports appropriate for each role in your company. With drill-down capability, you can move from a summary level directly to greater detail, and you can see real-time information.

inventory management

Slash inventory costs by providing better control of stock levels. ERPLY allows you to set multiple pricing rules based on individual customers, variations, volume and more. Fully integrated with CRM module, your customers, sales reps and partners can view inventory levels on your Web store.

point of sale (POS)

Our POS module is ready to be used with all point-of-sale hardware – thermal printers, cash drawers, barcode scanners, even customer displays. A touchscreen interface is easy to operate.
